

Monthly IT Operations Report

System-focused operational report covering notification gateway availability, message routing, queue performance, provider delivery, incidents, support tickets, integrations, and maintenance activities.

Report Period	January 2026	Department	IT Operations
Report ID	ITOPS-MON-2026-01-132	Report Date	10 January 2026
Generated Time	16:18 WIB	Report Status	Final
Primary System	Nimbus Notification Gateway	Supporting Server	Asterion Core Node
Supported Application	Meridian Claims Portal	Reporting Cycle	Monthly

Executive Summary

During January 2026, **Nimbus Notification Gateway** maintained **99.81% system availability** while routing outbound operational notifications for production services. The gateway was hosted on **Asterion Core Node** at **99.94% uptime** and supported notification events generated by **Meridian Claims Portal**, which recorded **99.41% application availability**. The platform processed **8.42 million messages** with a **99.36% successful delivery rate**. IT Operations recorded **12 incidents**, with 11 resolved and one medium-severity retry-worker issue remaining open at period close. The support queue received **74 tickets** and achieved **96.4% SLA compliance**. All six planned maintenance activities were completed, while one unplanned recovery event contributed **0h 44m** of service downtime.

99.81%	8.42M	99.36%	12
System Availability	Messages Processed	Delivery Success	Total Incidents

1. Managed System & Service Overview

Asset Type	Asset Name	Operational Role	Environment	Status
System	Nimbus Notification Gateway	Centralized outbound notification routing, retry, and delivery orchestration	Production	Operational
Server	Asterion Core Node	Message queue, worker runtime, and gateway processing host	Production	Healthy
Application	Meridian Claims Portal	Claims status and customer-event notification producer	Production	Operational

2. System Availability & Performance

Service Component	Target	Actual	Key Observation	Status
Message Intake API	>= 99.50%	99.93%	Stable producer connectivity and request acceptance	Met
Routing Engine	>= 99.50%	99.86%	No routing-table outage; one cache refresh incident	Met
Queue Processing	>= 99.50%	99.72%	Short backlog growth during provider throttling	Met
Email Provider Connector	>= 99.50%	99.48%	Minor acknowledgement delay on one provider path	Near Target
SMS Provider Connector	>= 99.00%	98.88%	External provider timeouts increased retry volume	Below Target
Overall System	>= 99.50%	99.81%	Gateway remained available despite connector degradation	Met

System Performance Indicators

Indicator	January 2026	Target	Assessment
Average Enqueue Latency	184 ms	<= 250 ms	Met
95th Percentile Delivery Orchestration	1.92 sec	<= 2.50 sec	Met
Message Delivery Success Rate	99.36%	>= 99.00%	Met
Retry Rate	2.7%	<= 2.5%	Needs Review
Dead-Letter Queue Rate	0.12%	<= 0.10%	Needs Review
Duplicate Suppression Success	99.98%	>= 99.90%	Met

3. System Incident Management

Severity	Total	Resolved	Open	Resolution Rate
Critical	0	0	0	100%
High	2	2	0	100%
Medium	6	5	1	83.3%
Low	4	4	0	100%
Total	12	11	1	91.7%

Incident ID	Date / Time	Component	Category	Impact	Resolution
INC-260102-014	02 Jan 2026, 09:47	Routing Engine	Rule cache stale	High	Resolved
INC-260103-029	03 Jan 2026, 15:12	SMS Provider Connector	Provider timeout	High	Resolved
INC-260105-041	05 Jan 2026, 10:38	Queue Processing	Backlog growth	Medium	Resolved
INC-260107-058	07 Jan 2026, 16:21	Delivery Callback	Delayed acknowledgement	Medium	Resolved
INC-260109-067	09 Jan 2026, 11:16	Retry Worker	Retry storm threshold	Medium	Open

Incident Analysis

The incident profile was dominated by provider-connectivity and retry-path behavior rather than core gateway unavailability. The two high-severity incidents were contained without sustained loss of the intake API or routing engine. The remaining open item concerns retry-worker burst behavior observed after consecutive SMS provider timeouts; delivery continued through delayed retries, but additional guardrails are required to reduce queue amplification.

No critical incident was recorded. The overall incident resolution rate was 91.7%, and all customer-facing high-severity impact was restored before period close.

4. System Support / Ticket Management

Metric	January 2026	Target	Status
Total Tickets	74	-	Recorded
Resolved Tickets	71	>= 90%	Met
Pending Tickets	3	<= 10%	Met
SLA Compliance	96.4%	>= 95%	Met
First Response within SLA	97.3%	>= 95%	Met
Average Resolution Time	4h 58m	<= 8h	Met

Ticket Category Breakdown

Ticket Category	Tickets	Resolved	Pending	Share
Delivery Delay	18	17	1	24.3%
Routing / Template	13	13	0	17.6%
Provider Connectivity	12	11	1	16.2%
Queue / Retry	11	10	1	14.9%
Access / Configuration	9	9	0	12.2%
Monitoring / Alert	11	11	0	14.9%
Total	74	71	3	100%

5. Maintenance Management

Maintenance Type	Planned	Completed	Downtime	Result
Routing Rules Release	1	1	0h 11m	Successful
Message Queue Optimization	1	1	0h 14m	Successful
TLS Certificate Rotation	1	1	0h 06m	Successful
Provider Connector Maintenance	1	1	0h 09m	Successful
Monitoring Threshold Tuning	1	1	0h 05m	Successful
Message Log Housekeeping	1	1	0h 07m	Successful
Unplanned Notification Recovery	1	1	0h 44m	Completed

Maintenance Activity Log

Date / Time	Component	Activity	Owner	Outcome
01 Jan 2026, 08:40	Nimbus Notification Gateway	Routing configuration release and validation	Platform Team	Successful
03 Jan 2026, 13:25	Asterion Core Node	Queue partition rebalance and worker health review	Infrastructure	Successful
05 Jan 2026, 09:55	Nimbus Notification Gateway	Provider connector TLS certificate rotation	Platform Team	Successful
07 Jan 2026, 14:15	Meridian Claims Portal	Notification event schema and payload validation	App Support	Successful
09 Jan 2026, 16:05	Nimbus Notification Gateway	Retry worker recovery and queue normalization	Platform Team	Completed

6. Key Highlights & Observations

- **Nimbus Notification Gateway** recorded **99.81% availability**, exceeding the 99.50% monthly target.
- The gateway processed **8.42 million outbound messages** with a **99.36% successful delivery rate**.
- The **SMS Provider Connector** remained below target at 98.88% because of intermittent external-provider timeouts.
- Retry rate (2.7%) and dead-letter queue rate (0.12%) were slightly above target and require targeted tuning.
- IT Operations recorded **12 incidents**; 11 were resolved and one medium-severity retry-worker issue remained open at period close.
- The support queue handled **74 tickets** with **96.4% SLA compliance**.
- All six planned maintenance activities were completed successfully; one unplanned recovery event added 0h 44m of downtime.

7. Recommended Actions

Priority	Action	Owner	Target
High	Complete root-cause analysis for retry-worker burst behavior and implement backoff guardrails.	Platform Team	13 Jan 2026
High	Review SMS provider failover, circuit-breaker thresholds, and connector timeout policy.	Integration Team	15 Jan 2026
Medium	Reduce dead-letter queue volume through stronger producer payload validation and schema checks.	App Support	18 Jan 2026
Medium	Review queue autoscaling and worker-capacity thresholds on Asterion Core Node.	Infrastructure	20 Jan 2026
Low	Automate daily delivery anomaly review for provider-specific latency and rejection patterns.	Monitoring Team	24 Jan 2026

8. Structured Extraction Reference

Stable field labels are intentionally included to support controlled PDF extraction, preview validation, and tracker ingestion.

Extraction Notes

The structured reference section is designed as the authoritative key-value area for automated tracker ingestion. Values elsewhere in the report provide contextual validation and should reconcile to the same monthly totals where applicable.

Primary tracked asset: **Nimbus Notification Gateway** (System). Supporting relationship for this report: **Asterion Core Node** (Server) and **Meridian Claims Portal** (Application).
